

PROCEED WITH CAUTION
HYPER VENOM™

LIGHT-MEDIUM OIL

They say the brighter the color, the deadlier the venom and the new Hyper Venom is no exception. The color of the Hyper Venom is not all that is striking. This new addition to the Venom line pairs the Gear core with new Propulsion MXR Pearl Reactive coverstock for a lethal combination. Proceed with caution: the new Hyper Venom is the most angular Venom to-date and is absolutely deadly on light-moderate volumes of oil.

GEAR™ WEIGHT BLOCK

Featuring a low RG / low Differential, the fast spinning and low flaring Gear core promises stability in the mid-lane without the risk of burning up due to excessive flare.

15# RG: 2.48 | 15# Diff: .034 | Flare: 3"+

PROPULSION™ MXR PEARL REACTIVE

The Hyper Venom is the first ball in the Venom line to utilize hyper-angular Propulsion cover technology. Building from Propulsion cover formulations previously found in the Supra Rally, ExJ VIP Sigma, and Nuclear Forge; the Hyper Venom features new Propulsion MXR Pearl Reactive technology. This cover is tuned to create more down lane motion than the ExJ VIP Sigma, while providing more traction in the oil than a Supra Rally.

5500 GRIT LSP FINISH

The Hyper Venom comes finished at 5500 Grit LSP to provide plenty of length through the fronts, while retaining energy for a vicious backend bite.
